

Why  fullstack?

Embracing diversity

A little bit of history

- AngularJs was founded on 1st September 2014
- New organisers on March 2015
- First meetup on 16th of April 2015 (doubled in size with the first event)
- 17 meetups since
- Grew to over 650 members
- Consistent open format for all meetups.

Initial motivation

- We were working a lot with AngularJS at the time and we loved it
- We wanted to meet like minded people and gain more knowledge
- We thought that joining the community and actively participating was the easiest way to do that
- The community organiser was leaving and the group was about to be closed :(

What we did **right**

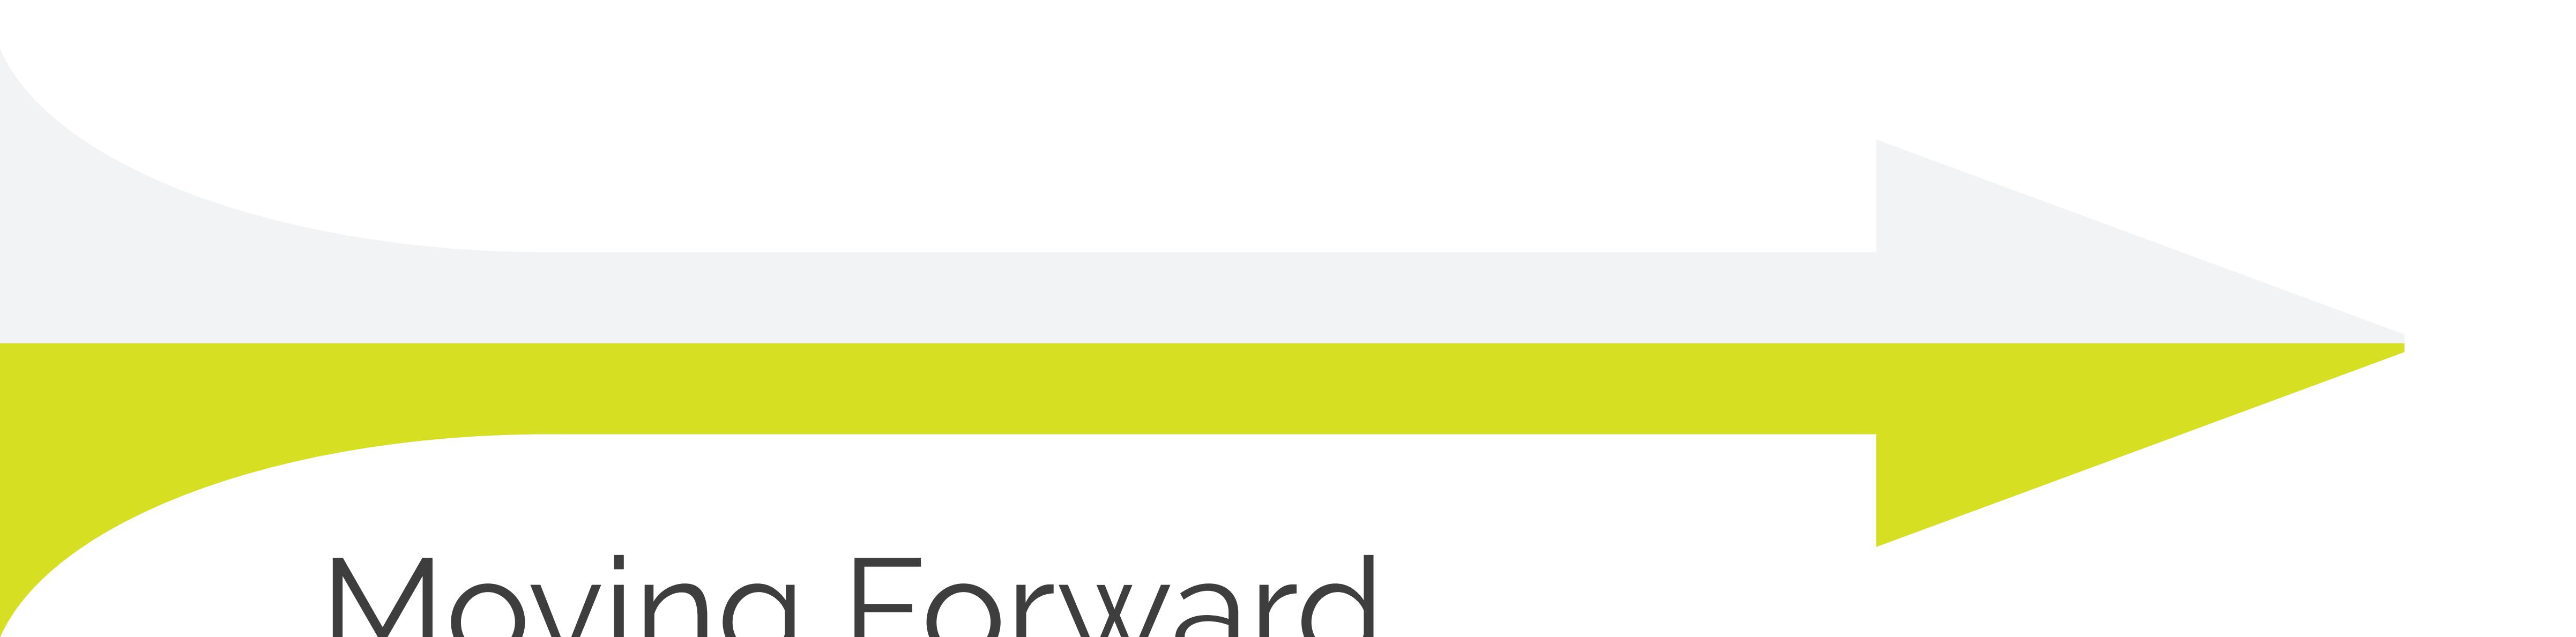

- First and foremost we actually held some meetups :D
- Kept the format open so that anyone can participate
- More to learn from two smart people talking than watching a presentation like this one
- Put together a topic list for future meetups. Again, with the help of the community.
- We tried to follow the latest trends as well as go deeper into more advanced topics

What we didn't do right

- We had no experience managing a community
- We did not check for the boring factor in some presentations
- We didn't encourage people enough to come and present
- We didn't hold another ideas meetup
- We were limited by the name of the group

Moving Forward

- Meetups at regular intervals
- A clear meetup schedule with at least 2 weeks notice
- Growing the community outside the meetups through Facebook, Twitter and GitHub
- Open invitation to join the organisers and hold regular meetups
- Extending the open format to workshops, hackathons and trainings

Why Fullstack?

- JS is not the only language we use and love
- We can't be tied to a framework forever
- Because we want to learn more
- We think times are changing and we will need this more than ever
- Because we are full stack developers

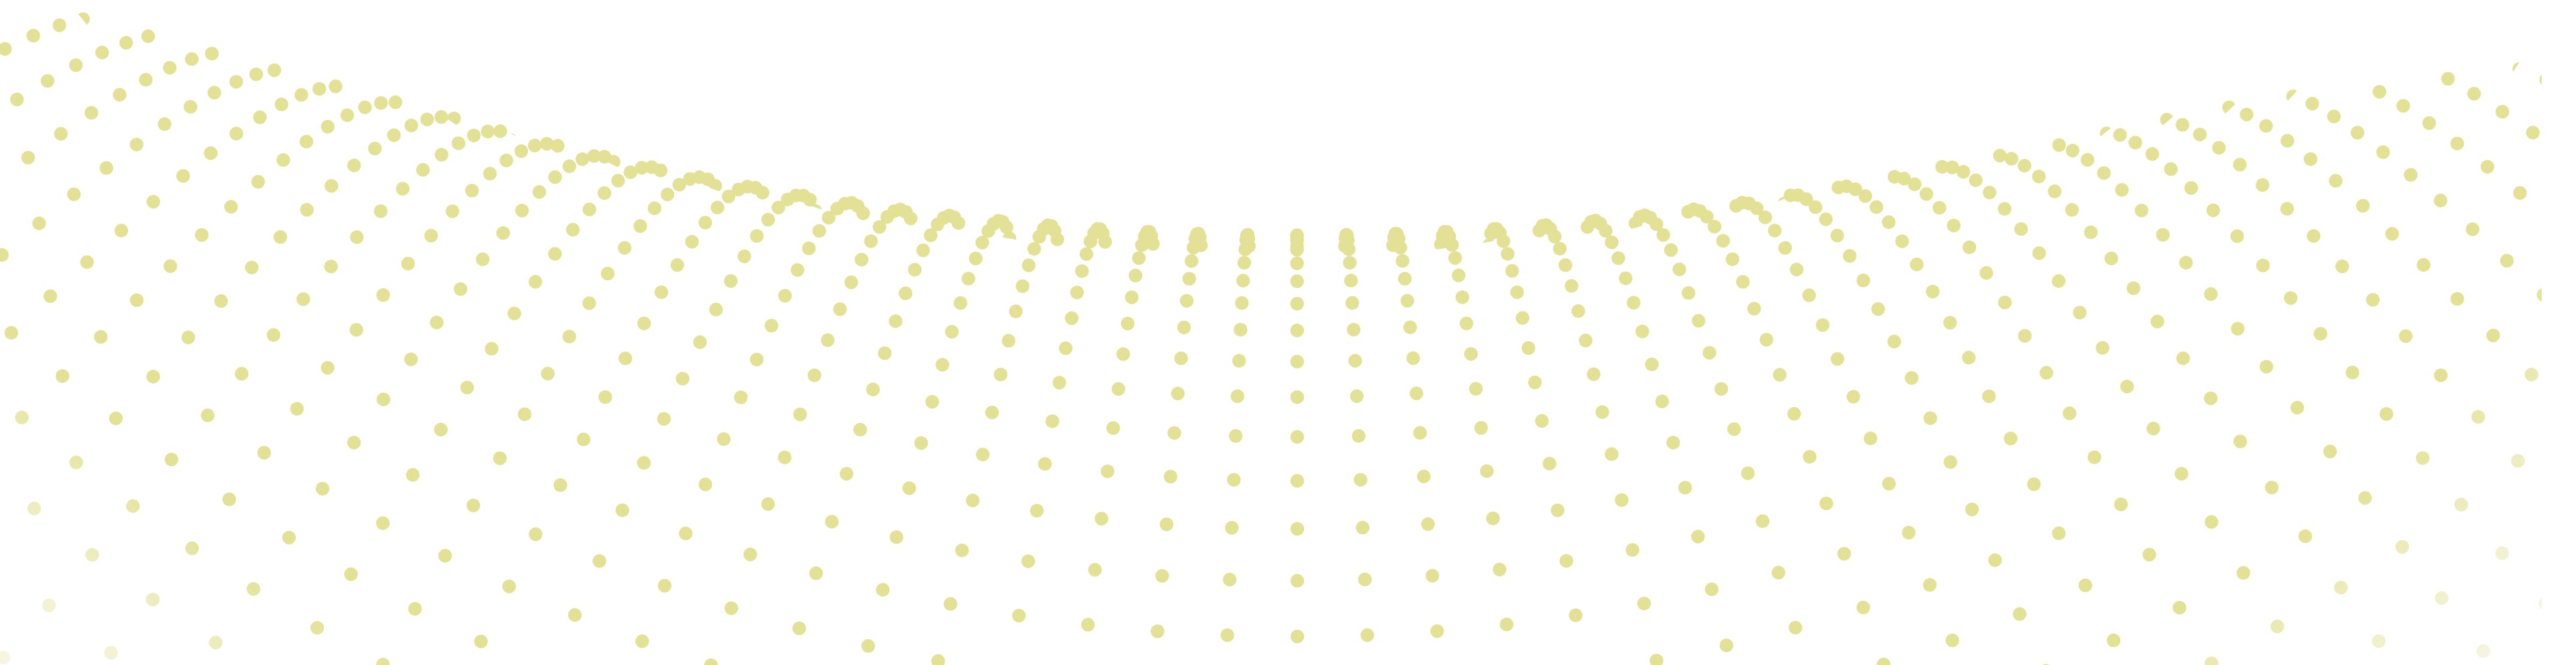

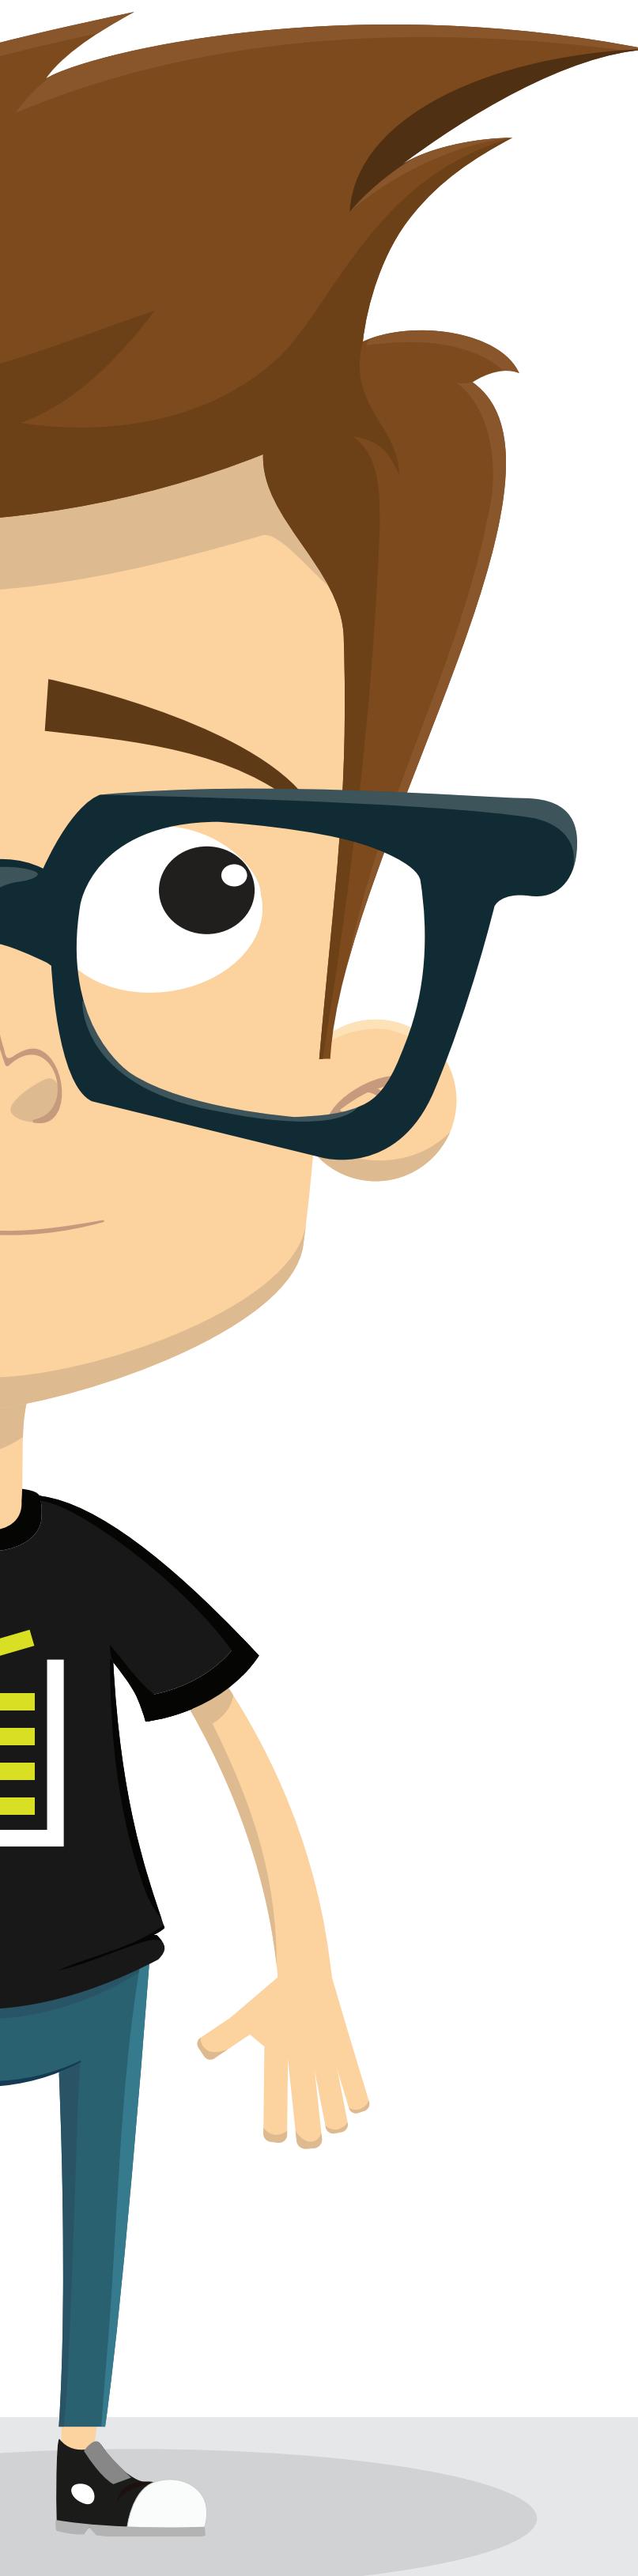

Future meetups

- Workshop: Continuous Deployment with Docker and Jenkins - in 2 weeks
- Xamarin - in 4 weeks
- Introduction to Golang - in 6 weeks

What does it mean to be a
Full Stack Developer to you?

What technologies do you use
today or want to learn tomorrow?

What would YOU like to
see at FullStack Cluj?

Thank you
